

Mobile Radio Solutions

Once your students leave school property, the connection between your administration, transportation department, and drivers is critical. A missed call, a dead cell battery, or a dropped signal at the wrong moment isn't just inconvenient; it can be a safety issue. Mobile two-way radios are purpose-built for exactly this environment. Mounted in the vehicle, they're always powered, always ready, and designed to be heard clearly in a noisy bus.

Why not just use Cellphones?

Cell phones seem like an easy answer, but they create real challenges in transportation:

- Distracted Driving
- Dead Batteries
- Cell Coverage Issues
- No Instant Dispatch Communication

What Mobile Radios Deliver for Schools

Hands Free Communications

Push-to-talk operation means drivers keep both hands on the wheel. No fumbling with a phone while managing a busload of students

Reliable Coverage

Two-way radio infrastructure isn't dependent on commercial cell networks, so coverage stays consistent across your routes.

Always On, Always Ready

Vehicle-mounted radios draw power from the bus itself. No batteries to charge, no devices to forget.

Built for Vehicles

Mobile radios are designed for in-vehicle use: loud speakers that cut through road and cabin noise, durable mounts, and controls that are simple to operate.

Group Communications

Dispatch can reach every driver on the route simultaneously — ideal for weather alerts, schedule changes, or emergencies.

We Keep You Connected

We work with school divisions across Western Canada to design and deploy mobile radio systems for bus fleets of all sizes. Our team handles everything from equipment selection and vehicle installation to programming and ongoing support.
