

Communication Solutions for Transportation

About Westcan ACS

Westcan ACS is a Western Canada based communications solutions provider. We work with fleet operators, trucking companies, logistics managers, and yard supervisors across Alberta and British Columbia to design and deploy radio communication systems that hold up where it counts.

We understand the transportation sector. Drivers need clear, instant communication with dispatch. Yard supervisors need to coordinate multiple teams at once. Logistics managers need a system that scales as their operation grows. We build communication systems around how transportation actually works, not a generic off-the-shelf solution.

We serve the Transportation Sector

Alberta and British Columbia are demanding environments for transportation companies. Long hauls, remote terminals, inconsistent cell coverage, and harsh weather conditions create communication challenges that affect safety, efficiency, and the bottom line.

Westcan ACS builds communication systems designed specifically for these conditions, and for the people who keep goods and fleets moving through them.

Why Transportation Chooses Westcan ACS

**We're trusted by Transportation
Companies across Alberta & BC**

- Local Alberta-based team with deep knowledge of northern operations
- Certified Motorola Solutions Channel Partner - access to the full product lineup
- ICOM and Tait authorized dealer - broad solutions for every operation size
